Release Date: February 17

Mini Project

Note - You can use any software(s) that you find suitable for doing this Mini Project.

You have to make a video clip around 1 to 1.5 minutes long that showcases different characters/objects under animation. The project is very open ended. The video clip can be a trailer for some movie or a game. It can be like an action scene from a movie or maybe a small gameplay clip of some game. Try to make a video that is fun to watch but not offensive to anyone.

1 Characters and Objects

- You have to create 3D Models of the characters or objects yourself using tools like Blender.
- These can have textures or materials that you can apply on them.

2 Animation

- You have to animate the 3D objects in your video clip and they have to interact with each other in some way.
- You can use the software of your choice. (Preferably - Unity / Blender).

3 Story and Dialogue

- The characters can have a story that can be depicted in the video clip.
- You can make them speak to each other to convey this story.

4 Submission

Please upload the clip on Youtube (Public or Unlisted) or on Google Drive and share the link in the submission link in a file on Moodle.
